HTML TAGS

Tag	When to use it
`<html></html>`	Always.* Wraps around the entire HTML document
`<head></head>`	Always.* Goes right under the <html> tag. Includes css link tags inside
`<body></body>`	Always.* Goes after the <head> tag. Includes the rest of the page content
`<!-- -->`	When you want to add a comment to your code. Text put in between the '<!--' and '-->' will not show up in the browser
`<div></div>`	When you want to separate your code into sections. As a rule, use divs often
`<p></p>`	When you want to include a paragraph of text
`<h1></h1>, <h2></h2>, <h3></h3>, <h4></h4>, <h5></h5>, <h6></h6>`	When you're putting a header on your page (h1 is the biggest, h6 is the smallest. Most of the time, you'll be using h1 - h4)
`<a href="www.google.com">Google</a>`	When you want to add a link (this adds a link that says "Google" and goes to "www.google.com")
`<img src="example.png" />`	When you want to include an image (this includes "example.png")
`<link rel="stylesheet" type="text/css" href="example.css">`	When you want to include a CSS file into your HTML (this includes "example.css")

* these tags are mandatory in all HTML documents

BASIC HTML STRUCTURE

```
<!DOCTYPE html>
<html>
    <head>
        <link rel="stylesheet" type="text/css" href="example.css">
    </head>
    <body>
        <!-- this is a comment -->
        <p>Bonjour!</p>
    </body>
</html>
```
